

LEAN MANUFACTURING OVERVIEW

ITAC's Lean Enterprise tools and services are both proven and flexible. We'll take you and your people through four stages to address the issues that are specific to your company. Our goal is to have a lasting and meaningful impact on your operations

**Reduced cost, improved quality, faster delivery
Now you can get all three.**

Identify the Opportunities

The first step is for ITAC to assess how your organization conducts its activities. The purpose is to identify and prioritize where Lean can have an impact, and to establish a baseline. A list of goals will be developed during this phase.

Design the Solution

Together we will create a work plan for improvements. Included will be the development of "maps" for reaching the goals. Part of the process is to train your people to "think Lean" so that everyone is focused on the same goals, and so that the process can become self-sustaining.

Implement the Solution

One of the first steps of implementation is to target one area that can be used to demonstrate the success of Lean principles. From there we will move to a phased rollout. The process is multi-stepped, and involves mentoring, facilitation, instruction, and joint implementation with your company's team.

Stay Involved for Continuous Improvement

Lean is not a single event that you do once, and then forget about. It is an ongoing process where the payback continues to increase if it becomes part of your everyday effort. To help you in maintaining that forward momentum of improvement, ITAC continues to work with you to enhance your competitive edge, to measure your performance, and to realize further productivity improvements.
