

PULL/KANBAN TECHNIQUES

WORKSHOP

Pull/Kanban is an information system designed to gain control over and improve your flow of materials. It enables the allocation of factory resources based upon actual consumption rather than on forecasted demand. Pull/ Kanban links consuming and producing processes to enable a reduction in WIP and floor space, and improvements in both lead time and cash flow.

Reduce Inventories and lead time. Improve flow and simplify scheduling.

Benefits

- Controls shop floor inventory without MRP
- Reduces inventory and floor space
- Increases productivity
- Links producing and consuming processes
- Improves process lead times
- Improves Cash Flow
- Sets material storage at point of use
- Sets proper inventory and lot sizes
- Eliminates out-of-stock situations
- Improves on-time delivery
- Improved Customer Satisfaction

Description

Two-Day Workshop at your location for groups of 12 to 16.

This workshop offers attendees an opportunity to experience first hand the effects of utilizing a Pull/Kanban system versus the traditional push system. While designing a pull system for your facility, participants will learn the concepts of a pull system, its benefits, where to set “supermarkets” and how to set the proper “supermarket” inventory levels.

To Learn More

Workshops are given throughout the year, and for internal company groups, upon request. Contact ITAC at 212-442-2990 for the latest information.
